Part of the BRCAl-associated genome surveillance complex (BASC), which contains BRCAI, MSH2, MSH6, MLH1, ATM, BLM, PMS2 and the RAD50-MREI1-NBS1 protein complex. This association could be a dynamic process changing throughout the cell cycle and within subnuclear domains. ALTERNATIVE PRODUCTS:
                    and sporadic
                       colorectal cancer revealed by immunostaining is based on germline mutations, but rarely on somatic inactivation.",
Int. J. Cancer 97:643-648(2002)
-1- FUNCTION: Restores repair of base-base and single- nucleotide insertion-deletion mismatches, and increases the proficiency t process heteroduplexes with two-, three-, or four- nucleotide insertion-deletion mismatches. GTBP binds covalently to G/T

Genomics 36:288-295(1996).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   SEQUENCE OF 375-425 AND 1001-1050 FROM N.A.

Donohue P.J., Feng S.L.Y., Alberts G.F., Guo Y., Peifley K.A.,

Hsu D.K.W., Winkles J.A.;

Submitted (JUL-1996) to the EMBL/GenBank/DDBJ databases.

-!-FUNCTION: Restores repair of base-base and single- nucleotide

insertion-deletion mismatches, and increases the proficiency to

process heteroduplexes with two., three-, or four- nucleotide

process heteroduplexes with two., three-, or four- nucleotide

insertion-deletion mismatches. GTBP binds covalently to G/T
                                                                                                                                                         (G/T)

SIMILARITY: Belongs to the DNA mismatch repair mutS family.
SIMILARITY: Contains 1 PWWP domain.
                                                                                   01-NOV-1997 (Rel. 35, Last sequence update)
16-OCT-2001 (Rel. 40, Last annotation update)
DNA mismatch repair protein MSH6 (MutS-alpha 160 kDa subunit)
mismatch binding protein) (GTBP) (GTMBP) (P160).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                               .

"Intergeneric transfer and recombination of the 6-phosphogluconate dehydrogenase gene (gnd) in enteric bacteria.";
Proc. Natl. Acad. Sci. U.S.A. 91:10227-10231(1994).
-!-CATALYTIC ACITYTITY: 6-phospho-D-gluconate + NADP(+) = D-ribulos
5-phosphate + CO(2) + NADPH.
-!- PATHWAY: Hexose monophosphate shunt.
-!- PATHWAY: Belongs to the 6-phosphogluconate dehydrogenase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ch 4.8%; Score 137; DB 1; Length 468;
